PROFESSIONAL SUMMARY

Senior Software Engineer with 15+ years of experience rapidly absorbing complex domain architectures, building intuitive testing ecosystems, and scaling critical backend infrastructure. Most recently at OLO, served as a co-owner and domain expert for performance, load testing, and E2E frameworks servicing 500+ enterprise restaurant brands, while co-authoring company-wide quality standards. Expanding into agentic AI by building multi-agent orchestrations (LangGraph, LangChain), local LLM evaluation suites, and MCP-enabled harnesses to integrate AI across the engineering lifecycle. Seeking a Senior Software Engineer role leveraging agentic workflows and systems engineering to elevate developer velocity and platform quality.

EXPERIENCE

Sep 2023 – May 2026

OLO, Inc.

📍 REMOTE

SENIOR SOFTWARE ENGINEER II

- **Scale & Performance:** Co-led platform stability initiatives for OLO's C#/.NET Ordering platform on AWS and Kubernetes, improving reliability across infrastructure sustaining peaks exceeding 4,500 orders per minute.
- **Event Readiness:** Engineered a high-concurrency k6 regression suite mimicking historical failure scenarios, establishing a standardized readiness protocol used to verify system stability before major high-traffic events. The suite served as an early-warning indicator on at least two occasions, surfacing potential issues before they could impact production.
- **Infrastructure Modernization:** Orchestrated large-scale cross-team initiatives using Terraform, including cross-platform API migrations and high-scale database conversions (MSSQL, CockroachDB), ensuring zero downtime and maintaining strict contract integrity.

Jan 2018 – Aug 2023

SENIOR SDET II / SENIOR SOFTWARE QUALITY ENGINEER

- **Testing Architecture:** Co-architected a company-wide automated testing platform (Selenium, Playwright, k6) integrated into CI/CD pipelines (TeamCity, GitHub Actions, Octopus Deploy), enabling 10–15 product teams to accelerate release cadence from weekly to routine daily deployments.
- **Engineering Standards & Quality Governance:** Co-authored organization-wide quality standards adopted by 20+ teams, codifying procedural patterns in Confluence to align engineering principles across the company.

Feb 2016 – Nov 2017

InVisionApp

📍 REMOTE

SOFTWARE QA LEAD

- **Infrastructure Observability:** Designed TypeScript validation and Datadog monitoring tooling for enterprise AWS and Kubernetes deployments, delivering real-time visibility and Slack alerts across dozens of dynamically scaling clusters.
- **CI/CD Modernization:** Migrated legacy automation pipelines from Jenkins to containerized environments on Docker and Kubernetes, supporting continuous deployment with multiple daily releases.

Dec 2013 – Jul 2015

Viakoo

📍 REMOTE

SOFTWARE QA ENGINEER

- **Simulation Platform Architecture:** Architected a modular simulation engine from scratch (Java, Jenkins), empowering non-technical teams to validate complex system behaviors without writing code.
- **Synthetic Data Architecture:** Engineered a synthetic data generator mimicking high-throughput security pipelines, expanding the core engine into an interactive web app for live system demos.

Aug 2010 – Dec 2013

Shopatron

📍 SAN LUIS OBISPO, CA

QA TEAM LEAD

- **Leadership & Modernization:** Led a team of 3 engineers to modernize core product automation infrastructure using Selenium, Java, and Jenkins, advancing from Quality Engineer to QA Team Lead.
